

**Simple, easy
to use mobile
technology**

Sight On-site: Quick and easy compliance

Signalling an end to bulky paper checklists, Sight On-site enables business owners to simplify compliance monitoring, increase staff efficiency and effectively consolidate data for reports.

Your online checklist

- ✓ Sight On-site is a straightforward mobile app which enables your employees to tick off a series of actions from an online checklist, ensuring they are **complying with policies and regulations**.
- ✓ You are able to **monitor** when staff have completed required actions, view those still outstanding, whilst also being able to **assess** any issues that have been highlighted, by simply having your staff scan a **QR** code or **NFC** tag.
- ✓ After setting up your own tailored checklists, you can assign tasks to groups or individual employees, identify instances of non-compliance, set SMART objectives and run reports.
- ✓ Ideally suited to businesses with health and safety and monitoring responsibilities, including **universities, shopping centres, nursing homes, hospitals and managed office space**, Sight On-site ensures that security checks are carried out to high standards, in a timely manner and that any issues requiring a response are clearly identified and attributed to the correct member of staff.
- ✓ Not only does Sight On-site's easy to use technology help staff to complete their actions more efficiently, it makes it easier for you to monitor compliance within your facilities and see where improvements can be made.

How can Sight On-site benefit my business?

Sight On-site encompasses a wide range of features which can add value to businesses where regulation compliance is critical to their success. For example:

- ✔ **Compliance management**
Easily check compliance tasks and deadlines and ensure company regulations are being met
- ✔ **Workflow management**
Produce checklists of tasks that employees must complete during a shift
- ✔ **Shared work**
Groups of employees can use the same mobile device, enabling work to be shared between them
- ✔ **Health and safety**
Up-to-date logs of the conditions of buildings and equipment increases the safety of your facilities

Quality

Work is completed more efficiently and issues can be dealt with sooner, improving the quality of your service.

Maintenance

The software allows maintenance issues to be logged directly with the person responsible for fixing them, rather than relying on messages being relayed to them on scraps of paper.

Accountability

By logging in to the system, you can see which staff member has performed a patrol and who is therefore accountable for not reporting any issues.
